

XD-V55HS Digital Wireless Headset Microphone

Pure 24-bit sound for active performers

- Superior 24-bit, compander-free vocal reproduction
- Built-in EQ filter modeling technology
- 4th-generation Line 6 digital wireless platform

Line 6 XD-V55HS sets a new standard in hands-free wireless for active performers, musicians and presenters. With 12 channels of 24-bit, 10Hz–20kHz, compander-free performance, the XD-V55HS provides unmatched full-range audio clarity and license-free operation worldwide.

Based on class-leading, 4th-generation Line 6 digital wireless technology, XD-V systems provide unmatched performance, full-range sound and license-free operation worldwide.

XD-V55HS gives you the flexibility to choose from three EQ filter models (two for vocals, one for instruments), enabling you to optimize your sound based on wherever you place your mic, or when plugging in an instrument. Using the selector button on the transmitter bodypack, you can easily audition and choose from available presets, so you can deliver your performance with maximum clarity and impact in every situation.

To ensure peace of mind and the most reliable performance, XD-V55 systems operate in the 2.4GHz band, which is free from interference due to TV broadcast, public safety announcements, cell phone towers and other transmitting devices. Encoded DCL™ (Digital Channel Lock) technology prevents reception of any audio interference from other 2.4GHz devices and ensures signal integrity.

Built for rock-solid reliability, performance after performance, the XD-V55 receiver is housed in a robust aluminum chassis, built to withstand the rigors of the road. The 1/2U receiver includes rack ears, antenna relocation accessories and rackmounting hardware. The included adjustable headset fits comfortably and securely for the clearest sound.

Headset available in black
